EDUCATION

The LNM Institute of Information Technology (LNMIIT), Jaipur
B.Tech in Computer Science and Engineering

2023 – 2027

EXPERIENCE

AI/ML Intern, AICTE Indovation Center
Jaipur, Rajasthan

May 2025 – Jul 2025

– Constructed RAG (Retrieval-Augmented Generation) models using LangChain for Facility & Event Booking Systems.

PUBLICATIONS

Co-Author, Elsevier Neural Engineering Series
Elsevier Neural Engineering Book Series

2025

– Chapters: Issues and Challenges of Neurological Disorders Diagnosis Research, Opportunities and Future Directions of Neurological Disorders Diagnosis Research, Neurology Beyond Deep Learning, Ensemble of Deep Learning Algorithms for Neurological Disorders

PROJECTS

GitHub **RAGVerseAI**

- Built a full-stack platform implementing and benchmarking 10 distinct RAG architectures (Naive, Hybrid, Fusion, Graph, MultiHop, ReRank, Adaptive, Agentic, Self-RAG, Corrective) against a shared knowledge base, with an evaluation engine scoring relevance, faithfulness, and completeness across runs.
- ChromaDB for dense vector search, BM25 for keyword-based retrieval, spacy and NetworkX for entity extraction and knowledge graph traversal in the Graph RAG variant, and a FastAPI backend to orchestrate ingestion, chunking, embedding, and LLM-based answer generation

GitHub **Agentic Orchestration of Blog Generation End-to-End (LangGraph, MCP, RAG)**

- Built a multi-node AI agent using LangGraph and Groq (Llama 3.3) that automates technical blog creation by routing tasks between web research (Tavily API) and structured content generation.
- Contextual RAG Integration: Developed a Retrieval-Augmented Generation (RAG) system using ChromaDB and HuggingFace embeddings to enable a context-aware Q&A assistant that answers queries based on generated content.
- End-to-End AI Application: Engineered a full-stack solution with a Streamlit dashboard for real-time monitoring of system metrics, utilizing SQL-based thread management for persistent multi-turn user sessions. Also containerized through Docker.

GitHub **MRI Alzheimer's Classification Pipeline**

- Deployed a deep learning pipeline to classify Alzheimer's stages using 3D MRI scans from the ADNI dataset.
- Applied preprocessing (skull stripping, N4 correction, normalization, TorchIO augmentation) on 1000+ scans.
- Crafted a ResNet-based multi-view CNN with class balancing and regularization, achieving an accuracy of 92%.

GitHub **Incident Memory Assistant (N8N)**

- Engineered an automated incident-response pipeline in n8n, using webhook-based event routing, HuggingFace embeddings, and PostgreSQL with pgvector on Supabase to perform semantic similarity search over past incidents.
- Integrated Groq for LLM-based briefing synthesis and Slack for real-time delivery, closing the loop by writing resolved incidents back into the vector store so future retrieval improves with every resolution.

TECHNICAL SKILLS

Languages: Python, SQL

Tools and Frameworks: TensorFlow, PyTorch, Scikit-learn, TorchIO, FastAPI, FastMCP, Git, Docker, CrewAI, N8N, Autogen

Web Tools: HTML, CSS, JavaScript, Power BI

Core Areas of Interest: Deep Learning (CNNs (Convolutional Neural Networks), Transformers), RAG, LangChain, LangGraph, MCP, Data Preprocessing

EXTRA CURRICULARS AND ACHIEVEMENTS

- Content Writer member of Literary Committee, LNMIIT Cricket Team Captain, Sponsorship Head of Sports Fest Desportivos
- Udemy: 365 Career Data Science Course, Coursera: Generative AI with LLMs (DeepLearning.AI + AWS)
